W. ATLEE BURPEE
founded the Burpee seed
business in 1876 and estab-
lished Burpee's Fordhook
Farms in 1888 and Burpee's
Floradale Farms in 1909.

Dear Fellow Gardeners:

All history seems to indicate that gardeners and farmers furnish the foundation on which civilization is built, and in fact the basis on which all human life depends.

Gardeners and farmers are the most fundamentally important people in the world. Even our great scientists could not produce atomic energy without food. And the greatest artist could hardly exist without the food and the beauty that come from tilling the soil.

To you, tillers of the soil, everyone in the world is indebted. That I may help you grow better vegetables and flowers is my hope.

It is not just the material value of a garden that is important. The spiritual uplifting value of a garden to you, to your family, to your neighborhood and to the world also is important. Without gardens the world would indeed be a bleak place.

You can beautify your home with a flower garden and you can have much finer vegetables at lower cost from a vegetable garden.

And you can have fun! Every good gardener enjoys tilling the soil and watching plants grow. There is no more satisfying recreation than gardening.

Have a garden for beauty, for delicious vegetables and for pleasure.

This year and every year, I hope I may help you have a better garden with Burpee seeds, the best seeds that grow.

Faithfully yours,

*Luther Burbank,
the great plant scientist, wrote us:*

I have had the pleasure of sending many hundred customers to you for seeds during the past few years, as I always refer anyone asking for seeds to your firm, as personally I consider your house the most reliable retail house in the world, and I think that would be the verdict of the public at large.

Faithfully yours,

(Signed) Luther Burbank

4445 Curlilocks Asters, All Colors Mixed

NEW THIS YEAR This entirely new type of aster combines a pageant of rich colors, including some never before seen in asters, with outstanding improvements in plant habit. It is the first extremely early aster with ostrich-plumed flower heads, resembling the Cregos, borne erect on tall, base-branching stems. The large fluffy flowers, 3 to 4 in. across, are made up of gracefully curled petals. Colors range from pure white, light pink, shades of rose, vermilion and crimson to azure blue, deep blue, orchid and violet. Included are bright scarlet, salmon-pink and salmon-rose, colors entirely new to asters. The sturdy plants bloom extremely early in the season and have an outstanding base-branching habit, with at least 6 to 8 long, strong stems topped with flowers all in bloom at the same time. 20 in. plants.

Pkt. 35¢; $\frac{1}{16}$ oz. \$1.00; $\frac{1}{8}$ oz. \$1.85

Curlilocks Asters bring you for the first time, early asters of ostrich plume form topping tall, erect, base-branching stems. Plants are natural bouquets in the garden—may be cut and the entire plant used for making an arrangement inside.

Burpeeana Early Asters

Burpeeana Asters come into bloom extremely early. Flowers are globular, double, 3 to 4 in. across, with attractively incurved petals. They are highly prized in the garden and for cutting. Plants are of erect, base-branching growth, average 20 in. in height, with many stems per plant, each stem topped with a flower somewhat resembling the American Beauty in shape. Terminal flowers come into bloom at about the same time, thus making a grand showing in the garden. In our plantings, Burpeeana Asters reach the peak of their bloom two weeks or more earlier than any other asters with the exception of Curlilocks Asters, offered above.

Burpee's Giant Hybrid Zinnias

First named and introduced by Burpee in 1951

The loveliest flowers ever created. They include first and second generation hybrids, grow 5 in. and more across, with a pleasing variation in petal formation, many being of the informal ruffled type, some attractively curled, others gracefully quilled. The loosely arranged petals give the flowers an airy appearance, free of the stiffness of some other zinnia types.

Plants are strong, free blooming, 2½ to 3 ft. tall except Fireburst which grows about 22 in. tall. All are ideal for garden decoration and cutting. In our opinion these beautiful flowers have been wrongly named "Cactus Flowered" or "Giant Fantasy." No matter what name you prefer, be sure to get your seed direct from Burpee—the originator.

4075 Apricot Flowers are finely quilled like some chrysanthemums, double, symmetrical and of an attractive shade of coral suffused apricot. Wonderful for garden display and a highly desirable and appealing shade for cutting.

4334 Blaze *All-America Winner*. Bursts into bloom with a profusion of brilliant mandarin-red flowers and, as the flowers attain size, changes to an exciting fiery orange-scarlet. And the amazing thing is that for all its size and vivid color, it retains the grace and informality associated with Burpee's Giant Hybrids. Gorgeous when cut, alone or with others and equally striking in the garden.

4375 Burpee Gold Large delightful blooms of saffron or golden yellow; symmetrical and fully double. Most flowers have slightly curled petals, creased toward the tips, which gives a fluffy, informal appearance so popular in these new zinnias; some petals are broader than others.

4331 Eskimo Flowers are loosely ruffled, open creamy white and change to white as they mature. Petals are long and narrow, slightly turned and faintly notched at the tips.

4333 The New Floradale Scarlet Vibrant scarlet-red flowers, made up of many ruffled and fluffed petals which curve under and twist gaily to create a deep flower of unusual grace and refinement. Perfect for bold accent plantings in annual and perennial gardens; prized for cutting. This strain is greatly improved in color and form.

4301 Glamour Girls Delightful mixture of the lighter shades of Burpee Hybrids. Included are buffy apricot, orange-apricot, chamois, orange suffused rose, salmon-pinks, soft rose shades, creamy yellows, salmon-cerise, cream, white and other soft, pastel shades and colors.

4352 Kismet A color entirely new to any type of zinnias, a gorgeous, radiant, Persian red. Flowers are highly double, attractive, and have the relaxing, informally quilled petals characteristic of many of the Burpee Hybrids. Kismet is very free blooming and will make a grand showing in your garden and add brilliance to cut flower arrangements.

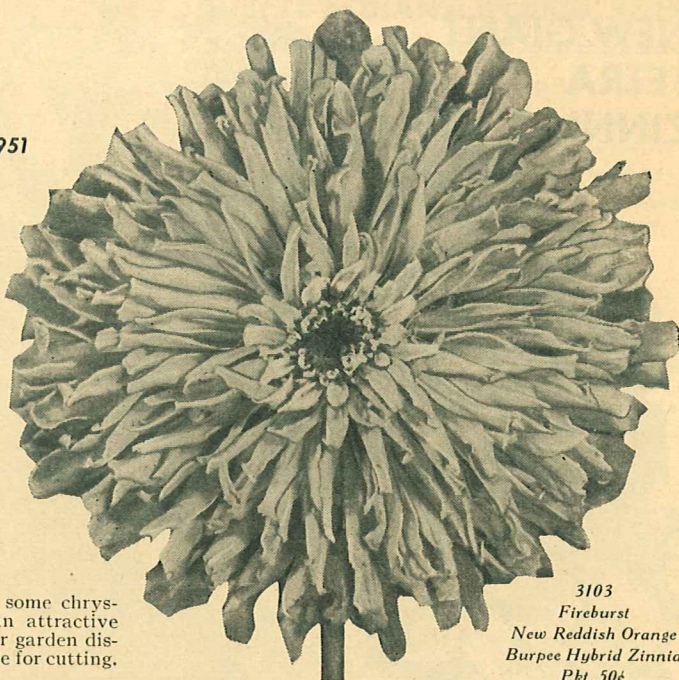

4325 Riverside Beauty Warm, luminous azalea-pink flowers of an airy, informal appearance, the petals twisted and gaily curled. Long, strong stems support the large flowers that are lovely for garden and prized for cutting.

4351 Rosalind Distinctive bicolor. The large, exquisite flowers are bright rose pink shading to salmon-rose in the centers. The fluffy heads which have loosely ruffled to curled petals are borne on strong stems for cutting.

4305 Sunny Boy Rich buttercup-yellow flowers made up of many delightfully ruffled petals alive with color and brilliancy. A planting of Sunny Boy Zinnia is attractive in the garden and the flowers wonderful when cut.

3103 Fireburst *NEW THIS YEAR* Bushy upright zinnia plants covered with immense blooms, of a gay vibrant shade of reddish orange. The large thick flowers, 4½ to 5 in. across, have graceful, loosely ruffled and quilled petals which seem to catch and reflect every beam of light. Long stems and good substance make Fireburst fine for cutting. Plants are a little lower than those of other Burpee Hybrid Zinnias, just under 2 ft. tall. Pkt. 50¢; ¼ oz. \$1.35; ½ oz. \$2.25

4426 Rosie O'Grady Distinctive bicolor with a deep rose center that shades toward the outer petals to a soft rose. The flowers are made up of attractively curled and twisted petals that are characteristic of the graceful, informal Burpee Hybrid Zinnias. A beautiful sight either in the garden or when they are used as cut flowers. Pkt. 40¢; ¼ oz. \$1.25; ½ oz. \$2.00

4323 All Colors Mixed Burpee Giant Hybrid Zinnias

New and better blend—many colors and showy color combinations never before seen in these or any other zinnias. Chinese corals, vermilions, soft shades of orange, unusual pinks, carmine-rose, saffron-yellows with pink on reverse of petals, fire reds changing to orange and many flowers with cream or yellow centers that give an unusual and effective two-tone effect. Shading of color on individual petals also gives interesting color tints not usually seen in zinnias. Their glistening beauty, stem length, and keeping quality make them one of the most popular of all cut flowers and they are prized for exhibition purposes. Pkt. 25¢

NEW GIANT TETRA ZINNIAS

Burpee's Giant Tetra Zinnias

4425 Shades of Rose These giant tetraploid zinnias are as big as any we have ever seen, 6 in. and more across, including both dahlia flowered heads and some of the informal type. Lovely warm colors from salmon-pink through rose-pink and cerise-rose to cherry red seem to take on extra richness from the thick, velvety petals that are large and loosely arranged. Very robust plants, 2 to 2½ ft. tall, produce strong laterals with lush, dark green foliage and long-stemmed giant blooms that are excellent for cutting. Flowers keep well.
Pkt. 50¢; ½ oz. \$1.25; ¼ oz. \$2.25

We began experiments many years ago on the treatment of Zinnias with colchicine after introducing the first tetra ploid annual, Tetra Marigold, 18 years ago when we coined the word Tetra. The second tetraploid annual, Tetra Snaps, was introduced by us in 1946. Now we offer this exciting new giant zinnia—Tetra Shades of Rose.

BURPEE'S GIANT PANSIES

Pansies always have been a great specialty with us and we are justly proud of our strains. Their wide range of colors, markings and forms, their easy culture, have made Burpee pansies universally popular. Pansies succeed best in fairly rich, well-drained soil in a sunny position, and produce their finest flowers in the cool, early days of spring. Keep flowers picked during the summer, plants pinched back to produce new growth and flowers in early fall. Seeds may be sown outdoors when soil has become warm; for earlier blooms, start seed indoors or in a hotbed four to six weeks before your usual outdoor planting time.

4222 Floradale Giants Mixed

Burpee's outstanding strain of giant pansies developed over a period of years through breeding, close and careful selection. The range of colors is unusually large, including reds, yellows, blues, etc., the majority attractively blotched with contrasting shades. Many of the blooms are nicely waved and fluted. Plants are well-rounded and profuse bloomers. Unsurpassed blend.

Plants grow 15 to 24 in. tall, depending on the variety used and the locality in which it is grown.

Seeds of the tall dahlias should be started early indoors; the seed of the dwarf varieties may be sown in the open when the soil has become warm. Dwarf growing varieties reproduce fairly true to color and type, but the tall kinds can be expected to produce some singles and semi-doubles as well as full double blooms.

Burpee's Almost White Tall American Marigolds

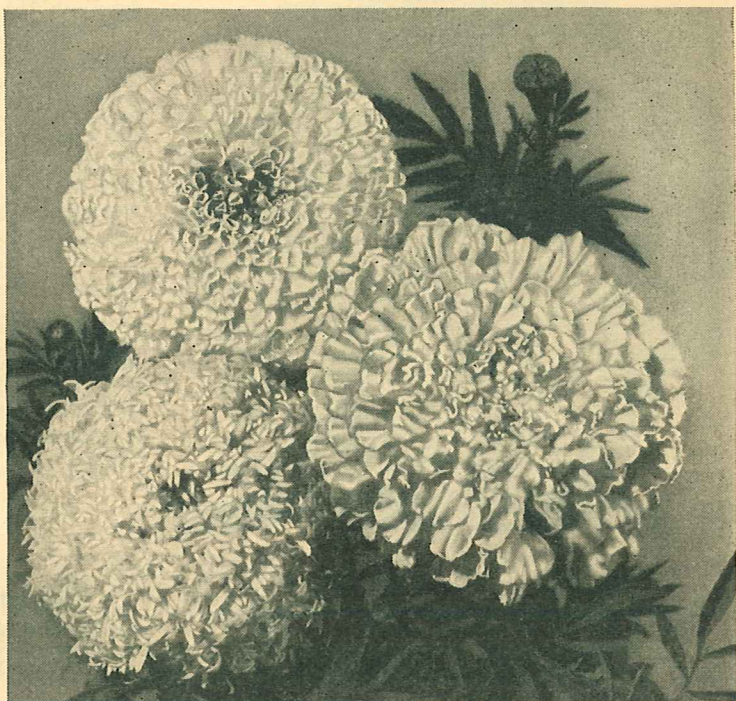

\$10,000 for a Pure White—3 Valuable Offerings to help you find one

We are still looking for a pure white marigold. We have been getting marigolds nearer and nearer to white, but as yet we do not have a pure white one. Will you help us?

Burpee will pay you \$10,000 if you are the first person who sends us seeds that grow the first White Marigold as big as Man-in-the-Moon Marigold, and as white as Snowstorm Petunia. It must be understood that you will not give or sell White Marigold seeds to anyone else, and that all seeds sent to us become the property of W. Atlee Burpee Co., with the exclusive rights to name, introduce and sell, and no seeds can be returned.

If you find a pure white marigold, do not cut the flowers but let them go to seed and send about 100 seeds to us at Philadelphia 32, Pa., Clinton, Iowa, or Riverside, California. We will plant the marigold seeds on our Floradale Farms and the results will be judged by the President of the W. Atlee Burpee Co. and two other distinguished horticulturists. The decision of the majority of the judges will be final, and the results will be announced in our seed catalogs.

In this world-wide search for a pure white marigold, anyone, anywhere, may submit seeds except Burpee employees or their families. It is understood that all seeds submitted for trial are accepted by us only under the above conditions.

3244 Burpee's Miracle Marigolds

Hybrids of Nearest-to-White Selections
NEW FOR 1959

To speed the search and hasten the payoff day for a pure white marigold, Burpee hybridizers made hundreds of crosses with the palest marigolds they could find. Some of these crosses were with marigolds that were almost, but not quite, pure white. The descendants of these crosses are Burpee's new Miracle Marigolds, offered for the first time this year.

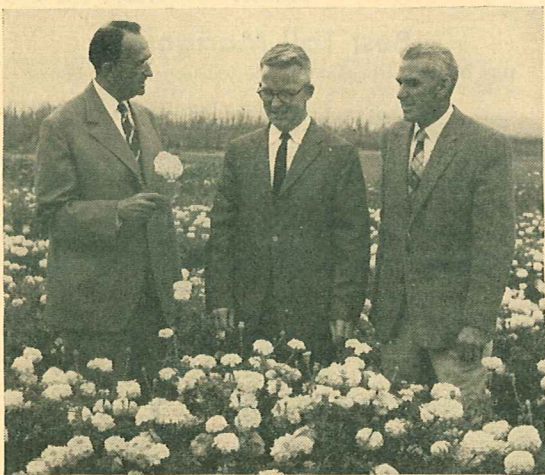

The genes—which determine a flower's characteristics—are so mixed up in these hybrids we feel strongly one of the recombinations will produce the white marigold we have been trying so hard to find. Miracle Marigolds will contain many big, fully double, pale primrose flowers, of good form in carnation, peony or chrysanthemum flowered types of tall American marigolds. Because they are hybrids there will be great variation in color, as well as in other respects, and you will have some wonderful flowers in your garden that no one has ever seen before. And perhaps you may be the one to discover a pure white marigold. The plants vary in height from 2 to 3 ft.

Judging "White Marigold" trials at Floradale Farms

The 1958 judging of "White Marigold" trials at Burpee's Floradale Seed Farms, Lompoc, California was done on August 15, 1958. The judges, shown from left to right, were David Burpee, W. Atlee Burpee Co., Dr. Darrell E. Walker, The Pennsylvania State University and Dr. Vernon T. Stoutemyer, University of California at Los Angeles. As a pure white marigold was not found in the plantings of seed sent in by gardeners from all over the country, the \$10,000 offer is repeated.

AMERICAN MARIGOLDS

(Formerly Known as African Marigolds)

Nobody knows why Marigolds have been called African and French for they are native Americans. In France the big one (*Tagetes erecta*) is called "The Rose of India." The little one (*Tagetes patula*) that we call French is called "The Carnation of India." In India the Marigold is called "The Good Luck Flower."

Now we are calling the big one (*Tagetes erecta*) "The American Marigold." Because the word French has been most closely associated with the Dwarf Small-Flowered Marigold, we still list it as French to avoid confusion, although it, too, is a native American.

When Cortez conquered ancient Mexico he found Marigolds growing in the gardens there. He took seed back to Europe and soon they became the favorite flower for the devout to place at the altar of the Virgin Mary. Because of this they became known as Mary's Gold, and then as Marigold.

Some commercial growers want the Rose to be named our National Flower, but the Rose is a native of other countries and has an ancient association with bloodshed. For instance, "The War of the Roses." And the Rose already is the National Flower of England.

Some Corn growers want the Corn Tassel named our National Flower, but this is not a perfect flower and is not especially beautiful.

Marigolds are easy to grow from seed and do well in all parts of the United States. The Marigold is everybody's flower. It is gay but humble. It has no thorns.

We think the Marigold, the "Flower of Good Luck," the "Friendship Flower" should be named the American National Flower.

Burpee's Climax

First Giant F₁ Hybrid American Marigolds

Climax Marigolds are the most gorgeous marigolds we have ever seen anywhere.

Being hybrids, it is suggested you plant Climax Marigolds in well enriched soil, water freely as needed and disbud to get the largest and best flowers. F₁ hybrids, to produce maximum results must be fed more than standard varieties. Properly grown, the almost globular blooms reach sizes up to 5 in. across and nearly as deep. The giant fully double flowers have unusual grace and charm. Plants, 2½ to 3 ft. high, are covered with an abundance of flowers, on long, cutting stems from midsummer through the season until frost.

Climax is available in three separate colors, a clear bright yellow, a deep, brilliant orange and a deep golden yellow. It is also available in a blend of the three colors plus some additional colors.

Climax Marigolds are the triumph of 20 years' Burpee research to create a Giant First Generation (F₁) Hybrid American Marigold with all the virtues of a perfect flower. Burpee's research program began with selection of the best existing varieties from which the most perfect specimens were selected year after year until they bred true from generation to generation. Then came years of experimental hybridizing to find the best combining parents. The results were rewarding, but left the problem of producing sufficient seed without hand pollinating each of the approximately 250 florets of a marigold flower. The solution came with a new application of genetic principles so 600,000 bees could be employed to do the pollinating.

Burpee's Tetra Snaps

Giant Ruffled Tetraploid Snapdragons

ALL ORIGINATED ON BURPEE'S FLORADALE FARMS

Tetra snaps are a Burpee scientific creation, originated through the treatment of the best regular or diploid varieties with colchicine—a drug or chemical derived from the bulbs of fall crocus. Genetically, they are known as tetraploids, for, when examined under the microscope, they have twice the number of chromosomes in their cells as the regular or diploid snapdragons.

Burpee's Giant Tetra Snapdragons are extremely large and attractively ruffled. Plants are exceptionally strong and husky, with glossy, dark green foliage, thick and almost leathery in texture; the stems are quite heavy. Under general field conditions the central spikes grow 2 ft. and more in height; these are surrounded by lateral spikes of lesser height. Base branching plants. Tetra Snaps are wonderful for cutting.

3495 Tetra Candlelight Clear, bright yellow, nicely formed, well placed flowers are freely borne on strong, erect spikes. Extremely rich and beautiful.

4267 Tetra Crimson Very large, deep but bright, velvety crimson flowers closely set on long, broad, tapering spikes above dark green, thick foliage.

4269 Tetra Pink Shades Exquisite variations from shell-pink to deep rose. The tapering spikes are filled with large, nicely formed, well placed flowers.

3499 Tetra Shades of Rose Especially selected for those who prefer the clearer, deeper shades of rose for their garden. A most appealing blend.

4258 Tetra White Creamy white changing to pure white with age; primrose throat which adds to the beauty of the large, attractively formed flowers.

SNAPDRAGONS

These exquisite flowers have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding best in rich or moderately rich soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable. Sow seed outdoors when soil has become quite warm; for earlier blooms sow the seed indoors six weeks before your regular outdoor planting time, and transplant the seedlings when the soil has become warm.

GLORIOSA DAISIES—Glorified Black-eyed-Susans

(Giant Hybrid Tetraploid Rudbeckia)

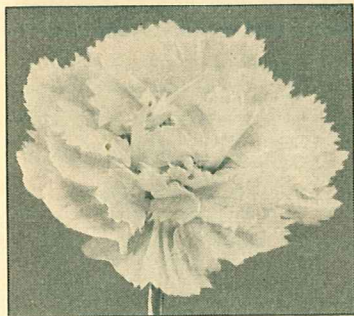

4397 Gloriosa Daisies, Mixed Colors Spectacular giant blooms of bright yellow, rich mahogany and glorious bicolors in many patterns of golden orange and gold, mahogany and bronze and mahogany and gold. Being hybrids, some semi-double or double flowers may appear in any planting.

Gloriosa Daisies are easy-to-grow, with flowers averaging 5½ in. across, some up to 7 in. across on long strong stems. Flowers are larger, with better colorings, longer and more petals than the best native rudbeckias. They get their tremendous size from their hybrid origin and tetraploidy. 3 ft. tall.

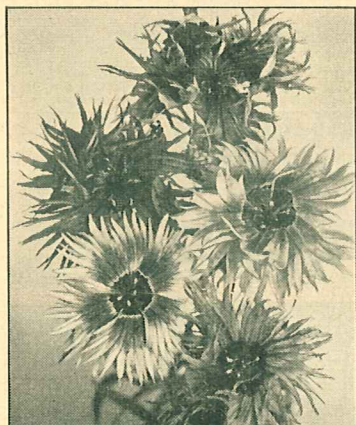

Although Gloriosa Daisies are actually perennial, they can be treated as an annual because the plants will flower the first season in late summer and fall if the seed is sown early. STRAWFLOWERS AND OTHER EVERLASTINGS

With the exception of Job's Tears, Briza maxima grass and Honesty, the varieties listed on this page are desirable for use as fresh cut flowers, and largely grown to dry for winter bouquets. Job's Tears is an annual grass grown for its grayish white seeds which are strung as beads. Briza maxima holds its panicles when dried and may be used alone or with dried flowers. Gourd fruits, when dried, are used for ornaments. Honesty is prized for its satiny, parchment-like partitions of the dried seed pods. The best method to dry the flowers and Briza maxima grass is to cut the material before it is fully developed, remove foliage, bunch loosely, and hang head downward in a cool, airy, shady place. The flowers of Bells of Ireland (page 14) and Celosia (Cockscomb), page 18, also last a long time if dried as you would everlastings. Flowers should be fresh and free from water. Dry them slowly and never over artificial heat.

There are tall and dwarf varieties for different purposes. All are best treated as annuals but seed must be started early indoors in pots, boxes or seed-pans so as to have plants large enough to set in the ground outdoors when weather and soil have become thoroughly warm.

Bloom from midsummer until frost if flowers are not allowed to go to seed. Prized for cutting.

BURPEE PERENNIAL FLOWER SEEDS

Perennial flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required before the plants produce their blooms. Sow seeds early so that you will have stronger plants to go through the winter and give more bloom the next season. Cultural directions are given on every bag. With the perennials we have included the best of the biennials, seed of which is sown one year, the plants blooming the second season, after which they die.

HARDY GARDEN CARNATIONS

Who does not love the delightful, spicy fragrance of carnations? They are ideal for cutting and excellent for beds, borders, wide edgings, rock gardens or pots. All do best in well-drained soil, rich in lime, and a sunny exposure. If seed is sown early, many plants will bloom the same season. It is advisable to cut off all flowering stalks soon after blooming to prevent plants from becoming straggly. Plants, especially Chabaud's Giant Improved and Burpee's Super Giants, may be lifted in the fall, cut back and potted up for indoor winter flowering where light and heat conditions are satisfactory for their culture.

Chabaud's Giant

Clove-scented, deeply fringed, large, double blooms, 2 in. and more across, may be had in 5 or 6 months from the time the seed is sown. Flowers are borne on sturdy stems 15 to 18 in. long. Vigorous, $\frac{1}{2}$ to 2 ft. tall.

BURPEE'S Famous Vegetable Seeds

GROW YOUR OWN VEGETABLES

The vegetables you grow, if used when they are in prime condition, will be fresher, taste better and contain more vitamins and minerals than those usually bought at the store. To enjoy the flavor of vegetables at their very best, they should be cooked as soon as possible after being picked. Many of today's best vegetables were first introduced by Burpee.

Vegetable Seeds and Roots are Sent Prepaid anywhere in the U. S.

Maturity Dates

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the garden. Of course, the time is average, having been obtained over a period of years in our trial grounds under different conditions; some variation is to be expected, depending on the season, locality and time of sowing. The approximate maturity dates given will show the relative time when different varieties will be ready to use.

Follow the Bull's Eye ☉

We have used this mark, ☉, for years to guide the gardener in the selection of vegetable varieties which we believe will give the best results under varied conditions of soil and climate. We have reprinted an old woodcut which appeared in early Burpee Seed catalogs, the forerunner of our present symbol. This mark, ☉, usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the best of their class. If you are not thoroughly posted which varieties to choose for your section, we suggest you select those marked with the bull's eye.

THE EFFECT OF SEASON, LOCALITY, ETC.

Throughout the vegetable section of this catalog, we have given the approximate maturity dates and other comparative information about varieties, such as their size, shape, etc. It should be understood that weather conditions, climate, soil, locality and time of sowing may affect any or all of these characteristics. The approximate maturity dates given will show the relative time when different varieties may be expected to be ready to use.

Bush Lima Beans

Easier grown than pole limas as plants do not need support. There are varied sizes and shapes of beans to meet your preference, whether it be the large thick (Burpee's Fordhook) or small thick "potato" type (Baby Fordhook), the large flat (Burpee's Improved) or the small flat baby butter lima (Henderson Bush). Some prefer one type for eating fresh, another for dry beans or freezing. We list the best varieties for the purpose. A pkt. of large-seeded varieties will sow 15 ft. of row; one lb., 100 ft.; the small-seeded kinds will, of course, go much further.

Burpee's Stringless
Green Pod
Bush Bean

Bush-Snap Beans

Before the introduction of stringless bush beans, green and yellow podded varieties were known as string beans and this name, unfortunately, seems to remain in many localities. Now that strings and tough fiber have been bred out of these varieties, we are referring to them as snap beans. Take a pod, green or yellow, break it quickly and see how it snaps. Pods are most delicious, raw or cooked, if picked when quite young and tender. They have more vitamins than, are better for you and, of course, they taste better. A pkt. of seed will sow about 25 ft. of row; one lb. will sow about 150 ft.

They do best if the vines, which grow 5 to 8 ft. and more high, are given support, the most frequently used being rough poles, although they may be planted 3 to 5 in. apart along a trellis or fence or along a series of strings on which they may be trained.

Pkt. 20¢; oz. 60¢; ¼ lb. \$1.55

To really enjoy a cantaloupe, fruits should be allowed to fully ripen on the vine for, with the exception of Honey Dew, they do not become sweeter in flavor after being picked. Fruits are ripe when the stem, attached to the melon, will slip from it with a slight touch of the thumb. If the stem does not slip off easily, the melon is not ripe and should remain on the vine. Many persons can select ripe melons by their aroma. A pkt. of seed (except Burpee Hybrid) will plant 12 groups, 1 oz. 120 groups or so-called "hills."

CELERY

Celery is a popular vegetable served raw as a relish or cooked in different ways. May be used from the time plants are one-half or two-thirds grown until fully matured. Stalks may be blanched to make them more crisp and tender, although many persons prefer them unblanched, especially Burpee's Fordhook and Giant Pascal. Both are famous green celeries.

A pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants. Days to maturity are from the time the plants are set out in the garden. Some variation may be expected.

Not a true cabbage, resembles Cos Lettuce somewhat. Where summers are cool, seed may be sown in early spring, otherwise sowings should be made about 3 months before first expected frost. SWEET CORN loses its sweet flavor rapidly after picking. To enjoy it at its best, it should be home grown and eaten as soon as possible after ears are pulled. Take husks off promptly and if necessary to keep corn for a short time put the husked ears in transparent bags and keep at a 40 to 50° temperature until ready to use. Whether you grow yellow or white grained corn is a matter of preference as is the selection of hybrids or open pollinated, the so-called standard varieties. It is not advisable to save seed from plantings of any hybrids because there will be a reduction in yield the next year. A pkt. of seed will plant 4 rows, each about 25 ft. in length; 1 lb. will plant 300 groups or "hills."

Explanation of White Spine and Black Spine

Cucumbers are divided into two families, "White Spine" and "Black Spine." The spines are the miniature stickers that protrude from the warts when fruits are young. White spine cucumbers turn to a creamy white when old; black spine varieties turn to a yellowish orange when matured. Pickling cucumbers are black-spined; all others, with the exception of Improved Long Green, are white-spined.

Greenleaf Vegetables for Winter Use

Greens and salads are highly beneficial to health as they are good sources of minerals and are also rich in vitamins. They are easily grown, very palatable, and may be had in a wide range of flavors from the piquant tang of endive to the mild taste of lettuce. Combinations of greens and salads are highly desirable and pleasing.

"Greens" grow best during the cool seasons of the year. In addition to spring plantings, you should plan to sow again in mid- or late summer for fall use or later where winters are not too severe.

Lettuce, the brittle, tender leaves of the crisp and loosehead types; **Endive**, the refreshing flavor of the curled or the tangy taste of the Batavian Escarole; these are the universal favorites. Then, there is **Chinese Cabbage** with its delicate celery-lettuce flavor, and for many weeks after frost you can use the regular Cabbage. Others include **Broccoli**, with its rich green, sprouting heads; **Brussels Sprouts**, whose flavor seems to improve after a light frost as does **Kale**; **Chives**, with its mild onion-like flavor; **Bunching Onions** for green scallions; **Leeks**, sweet flavored, thick stems; **Collards**, good boiling green with cabbage-like flavor; **Corn Salad**, well known Lamb's Lettuce; **Mustard Greens**, splendid for salad or cooked like spinach; **Parsley**, a "must" in every garden, for garnishing or dried for use as flavoring; **Spinach**, frosty nights improve the color; **Swiss Chard**, popular for boiling greens as is **Spinach Beet**; **Turnip Greens**, use the Foliage variety, leaves have a mild flavor when cooked like spinach.

Dwarf; largest podded main-crop variety

79 days. Extremely large pods, 5 to 5½ in. long, nearly round, dark green, and contain up to 10 extra large, sweet and most delicious peas of excellent quality, for eating fresh, canned or quick freezing. EDIBLE-PODDED or SUGAR PEAS

THE PODS ARE COOKED AND EATEN LIKE SNAP BEANS

Sugar Peas possess the tenderness and fleshy podded qualities of a snap bean and the flavor and sweetness of fresh green peas. When young the pods are cooked like snap beans; the peas are not shelled. At this stage, pods are stringless, brittle, succulent and free of fiber or parchment. Should pods develop too fast for use as snap beans, seeds may be eaten as shelled peas and are of the best flavor before they have reached full size.

5184 Mammoth Melting Sugar ©

Burpee's Earliest RADISHES

Burpee White—Outstanding for flavor

6096 Burpee White Ⓢ

Remains crisp and non-pilthy for a long time

25 days. Exceptional tenderness, mild flavor, crispness, and remaining long in edible condition, are most outstanding qualities of Burpee White Radish. When young, roots are nearly round, juicy and sweet with pure white skin and flesh. They become flattened in shape as they grow, the diameter increasing with age. Burpee White Radishes are at their best eating stage when $\frac{3}{4}$ to 1 in. across. Grown from spring-sown seed, they are crisp, mild and tender even if allowed to grow 2 in. across. The Burpee White Radish is superior in respect to available nutrients and low fiber content.

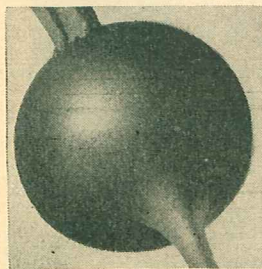

Pkt. 25¢; oz. 60¢; $\frac{1}{4}$ lb. \$1.65

6092 Comet Ⓢ —All-America Medal Winner

Three Extra Fine Radishes

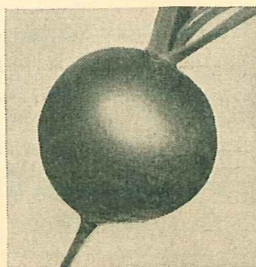

Burpee White (the world's finest flavored radish)

Cherry Belle (quick growing round red)

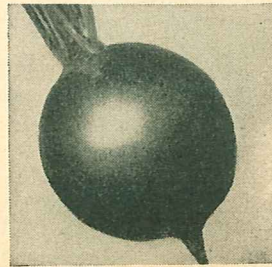

Sparkler (round scarlet-red with white base)

6661 — SPECIAL: One pkt. each of these 3 excellent radishes, value 65¢ for only **50¢**

Radishes do best in loose, deeply prepared soil and when growth is quick and steady. Sow seed of the earliest and mid-season varieties as early in the spring as soil can be worked. Length of tops, color of roots may vary with soil and growing conditions; shape of roots may also vary with soil, depth of planting and time of sowing. A pkt. of seed will sow about 20 ft. of row; 1 oz. 100 ft. When sowing beets, carrots, parsley and parsnips, mix in a few radish seeds to mark the rows where the slower-growing vegetables were sown. As the radishes are harvested it will tend to thin out the other crop. This is a good way to get the most out of a garden, especially when space is limited.

If your garden includes some of each of the three different classes of radishes—earliest, summer and winter varieties—it will keep you supplied with this refreshing vegetable practically all year 'round. You have your choice of many kinds.

MIDSEASON OR SUMMER RADISH

5304 White Strassburg 40 days. Become ready to use when the others are gone. Roots are $4\frac{1}{2}$ to 5 in. long and 2 in. in diameter at the shoulder, tapering gradually toward the small tap-root. Skin is white and thin; flesh is mildly pungent, white, crisp, tender and of an icy texture. As they grow more slowly, they endure heat better and are valuable for summer use. Remain long in good edible condition. Prefer a moderately light soil. We suggest a deep and thorough preparation of the soil to obtain the best roots.

Peppers are classed in two groups, the sweet or mild and the hot. The sweet fleshed peppers are desirable for slicing, salad and stuffing; they come in different forms—some blocky (Burpee's Fordhook), some heart-shaped (Burpee's Early Pimento), and another like a tomato in shape with a very mild flavor (Burpee's Sunnybrook). All are green at first changing to red when ripe, except Oshkosh, which turns to bright yellow.

Hot fleshed peppers vary in shape from those resembling a cherry to the extremely hot little tabascos and the long red cayenne. They are red when ripe. Fine for sauces, flavoring and pickling.

SPINACH

One of our most wholesome "greens" in the spring and early fall when cool weather is most favorable for its growth. Also suitable for quick freezing and canning. New Zealand Spinach will supply delicious "greens" throughout the summer and fall. It withstands heat, as does Swiss Chard and Tampala. A pkt. of true spinach seed will sow 25 ft. of row; 1 oz. 75 ft.

Bloomsdale
Long Standing

6093 Bloomsdale Long Standing ☉ — Vigorous plants

48 days. Heavy yielder of delicious "greens." The glossy dark green leaves are intensely crinkled, in addition to being of a very heavy texture. Valuable for spring or fall sowing. The rather erect plants remain in the rosette stage for a long time without bolting. Pkt. 20¢; oz. 35¢; ¼ lb. 90¢; ½ lb. \$1.25

5054 Nobel — Giant thick, smooth leaved

49 days. *All-America Silver Medal Winner*. The largest as well as the heaviest producer of all, with thick, smooth, pointed green leaves that are quite succulent, crisp, tender and of extremely delicious flavor. Long standing. Pkt. 20¢; oz. 40¢; ¼ lb. \$1.10; ½ lb. \$1.75

6091 New Zealand ☉ — Everlasting spinach

70 days. Makes strong plants which resist heat and produce an abundance of fleshy, brittle green leaves and young stem tips that can be picked repeatedly all during the summer and fall. When prepared for the table, it so greatly resembles spinach in appearance and flavor that most persons will not be aware of the difference. Botanically it is *Tetragonia expansa*—a native of New Zealand. Pkt. 20¢; oz. 40¢; ¼ lb. \$1.10; ½ lb. \$1.75

5058 America

5052 Virginia Blight Resistant

42 days. A greatly improved selection, the leaves of which are large, dark green, extremely crisp and tender. It is especially recommended for planting in soil where blight or mosaic disease is prevalent. Pkt. 20¢; oz. 40¢; ¼ lb. \$1.10; ½ lb. \$1.75

TAMPALA OR FORDHOOK SPINACH

5341 Valuable "green" that stands hot weather. Within 6 to 8 weeks from sowing, Fordhook Spinach is ready to use when entire plants make the most delicious "greens" either raw as a salad or cooked like spinach. The young leaves are so tender they require only a few minutes to cook; stems may be cooked like asparagus, their flavor like artichokes.

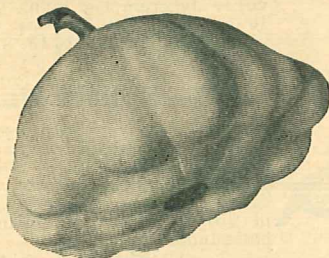

As a cooked, canned or quickly frozen "green," Fordhook Spinach is, in the opinion of many, superior to regular spinach or Swiss Chard—more appetizing color, more delicious flavor, shrinks very little, holds its dark green color better and is easier to prepare for use fresh or frozen. Pkt. 25¢; ¼ oz. \$1.00; oz. \$3.00

Summer SQUASH

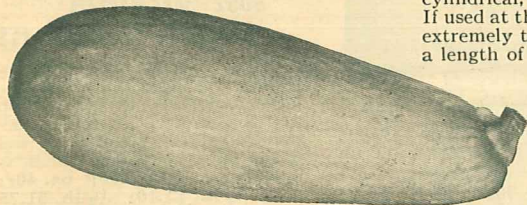

In descriptions we give the average size of fruits when fully grown. For the best eating, summer squashes are used while very young and tender; in fact, Early White and Crystal Bell are delicious if cooked whole when very tiny—an inch or more across. Generally speaking, a summer squash is too old for good eating when the thumb nail does not readily pierce the skin without pressure. Varieties of bush-like growth take up much less space in the garden than the running kinds and are especially adaptable for the small garden; Cocozelle and Zucchini are very popular bush types. A pkt. of seed will plant 8 to 10 groups; an oz. 30 to 40 groups or so-called "hills."

Skin is greenish white quickly changing to pure white as fruits develop. Will grow to 7 in. across and 5 to 6 in. deep but best used when small. Pkt. 25¢; oz. 85¢; ¼ lb. \$2.25

6106 Early Prolific Straightneck

50 days. *All-America Silver Medal Winner*. More easily prepared for the table than curve neck squash. Pkt. 20¢; oz. 50¢; ¼ lb. \$1.50

Fall and Winter SQUASH

The fall and winter squashes produce hard-shelled fruits which may be stored for use during the winter. Valuable for baking, boiling, making pies, etc. Many of the varieties here listed make excellent "pumpkin" pie and some are canned extensively for that purpose. Unlike summer squashes, fruits of the fall and winter varieties must remain on the vine until fully matured; gather them before frost, leaving part of the stem attached to the fruit. Handle carefully and avoid bruising. Easily stored in any dry place. Keep best if temperature of 70 to 75° F. is maintained for a week or two after which it should be held at 45 to 50° F. A pkt. of seed will plant 6 to 8 groups, an oz. 20 to 30 groups or "hills."

6115 Butternut 85 days. Exceptionally meaty. Fruits are 10 to 12 in. long and 4 to 5 in. across; bottle shaped, smooth, dark buff colored skin and a hard shell. The flesh is orange, dry, fine textured, and of a sweet nutty flavor. Good keeper. Vines are quite resistant to squash borer as stems are so tough as to normally prevent the female from inserting her eggs into the stem.

Pkt. 25¢; oz. 65¢; ¼ lb. \$1.85

6107 Buttercup 105 days. Turban-shaped fruits 4½ in. thick and 6½ in. across; weigh 4 to 5 lbs., blossom end marked with a prominent "button." Fruits may be used before the skin hardens, but the quality of the fine grained, sweet flesh will be better if they are allowed to form a hard shell; splendid for winter storage.

6112 Burpee's Bush Table Queen (Acorn)

80 days. Fruits are similar in size, shape and color to those of the green fruited Table Queen vine variety, described below; the flesh is of better quality. Plants, however, are of semi-bush growth, produce just as many fruits per plant as the vine variety but take less space in the garden so may be planted closer. Excellent keeper. Developed on Fordhook Farms.

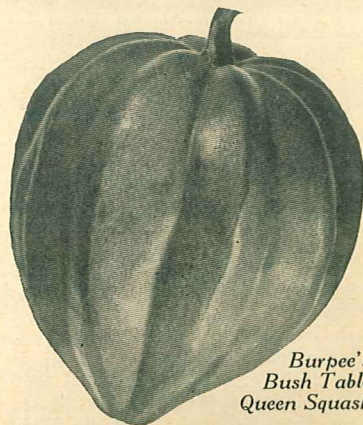

Pkt. 25¢; oz. 85¢; ¼ lb. \$2.25

6108 Royal Acorn 82 days. A family-size Table Queen, with acorn-shaped fruits, 7½ in. long, 6 in. across, dull dark green in color, turning dull orange after a period of storage. 5057 Table Queen Vine 85 days. Also known as Acorn and Des Moines. Acorn-shaped, 5 in. long and 4 in. thick; deeply ribbed, dark green skin and thick orange flesh that cooks dry and sweet. Baked halves are popular for individual servings. Good keepers. Extremely productive.

Big Boy is at its peak of performance in midseason, although large fruits are produced late in the season when many standard varieties decline in yield and size. Ideal hybrid for all purposes; it is so wonderful that the demand for seed is greater than for any other vegetable that we list.

Plants are very large, extremely vigorous, semi-upright to spreading with moderately dense foliage that protects the fruits from sunscald.

HYBRID TOMATOES

Hybrid Tomatoes are strong, vigorous growers and have the ability to outyield regular varieties, the extra quantities coming, in large measure, from the soil. It can be readily understood that because Hybrid Tomatoes can produce larger plants and higher yields they must be fed more than standard tomatoes. Tests have shown that hybrid tomato seedlings started in 4 in. pots or 4 x 4 in. bands, produced earlier and heavier yields than those started in 2½ in. pots or 2 x 2 in. bands when transplanted to the garden. To produce a maximum crop of large fruits, we recommend that you maintain good fertility and moisture in your soil. For this purpose, it is desirable to make your fertilizer application at the time of transplanting and, if possible, cover the ground around the plants with well-rotted manure when plants begin to bloom. Water during dry spells.

Each seed of an F₁ Hybrid Tomato and other F₁ hybrid vegetables is produced by carefully controlled crossing by hand of two distinct parent lines. This requires a great deal of work and entails a heavy expense but the resulting seed will produce a hybrid of extreme vigor, more uniform in growth, with bigger yields and better quality. We strongly urge that special care and attention be given to the sowing of the seed and the growing of the crop. Extra care will pay.

Large Pink TOMATOES

For years it has been customary to refer to the following varieties as pink fruited; the only difference between a red tomato and a pink tomato is the skin color. Red tomatoes have a yellowish skin while the pink has a transparent skin. They are usually milder and more delicate in flavor than red fruited tomatoes. The meat of large pink tomatoes is fleshy and contains few seeds.

5323 Burpee's Globe —Extra choice

80 days. All-America Silver Medal Winner. Where a main-crop pink tomato of solidity and quality, with high yielding ability, is desired, plant Burpee's Globe. Uniform, medium to large, rich pinkish red, globe-shaped, smooth tomatoes in clusters of 6 to 10; interior is firm, meaty, and free from any core. Contain little or no acid; a shy seeder, the seed cavities being full of solid meat.

Pkt. 25¢; 1/2 oz. 75¢; oz. \$1.35; 1/4 lb. \$3.85

5324 Oxheart—Extra large, deep fruits

86 days. Noted for its delicious and appealing flavor. One of the largest pink tomatoes ever introduced; often weigh 1 lb. and more. The oxheart shape of the pinkish red fruits is most distinct; interior is extremely solid with thick, firm walls and small cavities with few seeds.

Pkt. 25¢; 1/2 oz. 75¢; oz. \$1.35; 1/4 lb. \$3.85

5334 Ponderosa—Immense fruits

83 days. It is not unusual for the purplish pink, deep, somewhat flattened fruits to weigh 24 ozs. and more, though the average runs around 9 ozs. The seed cavities are remarkably small, which accounts for the solid, luscious flesh of a delightful mild flavor. Though the fruits are immense, they are of fine quality, tasty and palatable.

Oxheart—Extra Large Pinkish Red Tomato

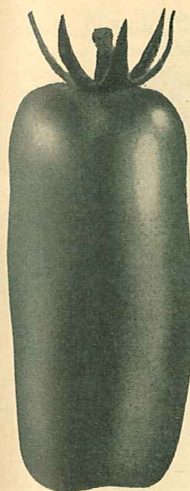

Sizes and Weights of Tomatoes

given in our descriptions are for the general field-run of fruits. Customers often write us that they have produced tomatoes bigger than we state they will grow. This is not surprising with special care, proper fertilizing, watering, pruning, staking, etc., they may easily do better than we claim. This might readily apply to other vegetables.

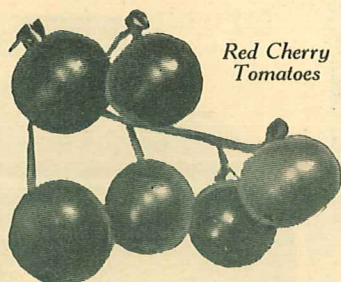

Tomatoes belong in every garden—they are easily grown and produce quantities of fruit for the space occupied. Picked when sun ripened, they have a flavor unequalled by any you may buy. As they can be served in so many different ways, one never seems to tire of them.

A pkt. of standard tomato seeds will produce about 100 plants; one oz. 5000 to 6000.

Burpee's Hardy Garden Lily Bulbs

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established they will increase in beauty each year. Most all lilies delight in a sunny location, but it is advisable to mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfier ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety—some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture. How-to-grow directions are sent with the bulbs.

7261 Gloriosa Lily LILY ROTHSCHILDIANA

A most unusual and fascinating garden lily in that it will climb if it has something nearby to which it may attach itself. Leaves are elongated, soft green with curling tendrils on the tips with which they cling to a fence, trellis, string or wire.

Lily Rothschildiana is exotic in color and shape. The petals are sharply recurved, brilliant red bordered golden yellow—a striking bicolor contrast, the red becoming darker as flowers age. Planted in full sun, the colorings are more brilliant but plants become stockier, shorter and the stems of less length. Blooms have remarkable keeping qualities so make wonderful cut flowers. They also make attractive pot plants.

Roots are entirely unlike any of the other lilies—they do not have scales but are somewhat like a small dahlia tuber, 4 to 6 in. long and a trifle thicker than a lead pencil. Plant in a horizontal position, 4 to 5 in. deep in full sun or semi-shade. They do best in a sandy soil, preferably on the acid side; it is essential that any soil in which tubers are planted be well drained. Not hardy except in frost-free sections.

This unique and interesting lily is a species discovered in East Africa. Early records show it was grown on the estate of the Hon. Walter Rothschild of England, for whom it was named. \$1.25 each; 3 for \$3.50; 6 for \$6.50; 12 for \$12.50

Plants are of stocky growth, quite branching and extremely free flowering. Nice for borders; invaluable for table decoration, as they keep in good condition for a long while after cutting.

Gladiolus Bulbs

Burpee's famous gladiolus are grown and admired wherever beautiful flowers are known. They make attractive displays in the garden, planted either in beds or in groups here and there in perennial or annual borders and are ideal for house decoration. If the spikes are cut when the bottom flower shows color, all the buds, clear to the top, will open. They are easily grown in any good, well-drained soil.

The gladiolus bulbs that we offer are large, **1½ in. and more across** and will produce the largest flowers and the tallest spikes. All Burpee bulbs are guaranteed to bloom or your money back. We offer an extra choice selection of named varieties on this and the opposite page.

You may order 25 bulbs or more of the same variety at the 100 rate.

Cultural directions are printed on every bag containing the bulbs.

Burpee's Lawn Grass Seed

SHIPPED PREPAID ANYWHERE IN THE U. S.

The best time to start your lawn, or to repair it, is during the cool weather of early spring or in early fall. The weather at these times is favorable for the development of domestic grass but unfavorable for most weeds and wild annual grasses. Why not plan now to have a luxuriant lawn that will add to the beauty of your home?

The Burpee leaflet, "GN 43 Construction and Maintenance of the Lawn," will be sent free upon your request. For new lawns, sow 1 lb. of grass seed to 200 sq. ft. of space; use 100 to 150 lbs. per acre. 1 lb. MERION Kentucky Bluegrass is enough for 500 to 750 sq. ft. To improve old lawns, use half of these quantities.

This beautiful lawn on Burpee's Fordhook Farms was produced from Burpee's Fordhook Finest Lawn Grass Seed
